

SheFi × AI Will Survive

AI Will Survive Workflows Guide

A few things you can steal today,
plus a framework for building your own.

Pick one prompt.
Try it on real work. Make it yours.

Prompts to Steal

Copy a prompt into your AI tool. Replace the brackets and attach notes or connect sources. Ask AI to flag anything it cannot access.

01 BUILD A CONTEXT DOCUMENT

I want to create a context document about [TOPIC] so you can work with me more effectively.

Start by asking what I want this context document to help you do better. Interview me one question at a time. Probe when my answers are vague or incomplete. Once you understand the subject, turn the interview into a structured document I can review and edit.

02 TURN MEETING NOTES INTO ACTION

Review my meeting notes from today. Identify every clear action item and who owns it. Use a due date only when one was explicitly discussed. Do not infer an owner or deadline that was not explicitly discussed.

For anything I own, organize the actions clearly. Draft any follow-up messages that should come from me. Do not send anything.

Flag anything where the owner, task, or deadline is unclear.

03 PREP ME FOR A CALL

Review my upcoming meeting with [PERSON]. Pull together the context I should know before the call: who they are, their role and company, our previous conversations, open threads, and anything I said I would follow up on.

Give me a concise prep brief. Link to sources and flag missing context. Do not invent past conversations.

If you cannot access my previous conversations, calendar, or other context, tell me what is missing instead of guessing.

04 CHECK WHAT YOU JUST CREATED

Run a separate research and verification pass on what you just created.

Identify important factual claims, statistics, dates, quotes, and recommendations. Use web research and my materials to check them.

Open original sources; do not rely only on search snippets. Compare credible independent sources for important claims.

Show each claim, its source link, and whether it is supported, contradicted, or unverified. Flag outdated information, disagreements, and inference.

Give me a corrected version and explain what changed. If you cannot browse or access a source, say what remains unverified. Never invent citations.

Design your own AI workflow

A workflow is a repeatable sequence of steps used to complete a job.

You are my Workflow Mapper.

Your job is to help me turn recurring work into a clearly defined AI workflow.

Interview me one question at a time. Do not jump to a solution before you understand how the work happens today.

Help me define:

- The problem or barrier I want to solve
- How the work happens today
- What a successful outcome looks like
- The context AI needs to understand
- What triggers the workflow and how often it should run
- What information it needs and where that information lives
- Which tools or systems it needs access to
- What rules or decisions it should follow
- What gets produced and where it should go
- Where I want human review
- How I will know the workflow is working

Once you understand the process, create:

- A Workflow Brief
- The simplest version I can test first
- The tools and connections required
- A starter prompt for running the workflow

Flag assumptions and unresolved questions.

Keep building.
